

Framework Selection Report

Pangasinan Heritage Digital Showcase

Selected framework: Next.js 14 (App Router)

Assignment basis

The activity requires a resilient, accessible, maintainable and high-performing platform optimized for 3G/4G mobile data, designed mobile-first, modular/decoupled, WCAG 2.1 AA-oriented, and suitable for static/JAMstack-style deployment. The required comparison is Next.js 14 (App Router) versus Nuxt.js 3.

Quantitative decision matrix

Criterion	Weight	Next.js 14	Nuxt.js 3
Bundle/performance	25%	9/10	8/10
Developer velocity	15%	9/10	8/10
Ecosystem maturity	15%	10/10	9/10
Learning curve	10%	7/10	8/10
Component architecture	15%	9/10	9/10
Documentation/community	10%	10/10	9/10
Project suitability	10%	10/10	9/10
Weighted total	100%	9.15/10	8.65/10

Why Next.js 14 wins

1. Performance: Next.js supports server rendering and static generation patterns, allowing pages to ship less client-side JavaScript when the architecture is kept component-focused. The implementation also uses lightweight CSS and local SVG assets to reduce unnecessary resources.
2. Developer velocity: the App Router provides a clear file-based application structure and React component model. This fits the required Atomic Design library and makes reusable components straightforward to demonstrate.
3. Ecosystem maturity: React has a very large ecosystem, while Next.js provides an established production-oriented framework around it. This is valuable for maintainability and future developers.
4. Learning curve: Nuxt receives a slightly higher score here because Vue can feel simpler for beginners. Next.js loses points, but the project's component requirements make the React component model a strong fit.
5. Project suitability: Next.js receives the highest score because the assignment explicitly asks for a modular component library, mobile-first UI, maintainability and static/JAMstack-style deployment.

Scoring note

The numerical scores above are a project-specific evaluation for this assignment, not laboratory measurements of identical applications. The matrix is used to make the required quantitative justification transparent and repeatable.

Conclusion

Choose Next.js 14 (App Router). It provides the strongest overall fit for the Pangasinan Heritage Digital Showcase, with a weighted score of 9.15/10 versus 8.65/10 for Nuxt.js 3.
